THERMOCHIMICA ACTA, VOLUME 167 (1990)

SUBJECT INDEX

Alkanes
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189

Alkanols
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189

Aluminium salts
Compensation effect in the thermal decomposition process of basic aluminium salts 145

Amino acids
The enthalpy of interaction of malonaldehyde with amino acids and myosin: effect of pH 235

Attapulgite
Isomorphic substitution in attapulgite and its influence on the dehydration process 139

Barium compounds
Preparation and thermal study of the magnesium, calcium and barium compounds with a glycine Schiff base containing an ester function 219

Binary mixtures
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189

Calcium
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293

Calcium compounds
Preparation and thermal study of the magnesium, calcium and barium compounds with a glycine Schiff base containing an ester function 219

Carbon
Mass effects on the surface reaction of chlorine with carbon 91

Chlorides
Thermochemical investigation of the solutions of several salts in molten urea at 413.15 K 73

Chlorination
Chlorination reaction of gibbsite and its thermal decomposition products with carbon tetrachloride 79

Chlorine
Mass effects on the surface reaction of chlorine with carbon 91

Colbalt(II) methanesulphonate
Kinetic studies on the thermal decomposition of tetrahydrated cobalt(II) methanesulphonate 123

Complex formation
Thermodynamics of complex formation of Ag^{I}. VII. Ag^{I}-thiocarbonyl ligand systems in methanol 1

Decomposition
Compensation effect in the thermal decomposition process of basic aluminium salts 145
Kinetic studies on the thermal decomposition of tetrahydrated cobalt(II) methanesulphonate 123
Solid-state thermolysis of *trans*-diammine-nickel(II) *catena*-tetra-μ-cyanonickelate(II) clathrates and their degradation intermediates 57
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293

Dehydration
Isomorphic substitution in attapulgite and its influence on the dehydration process 139

Dicyanonickel(II) clathrates
Solid-state thermolysis of *trans*-diammine-nickel(II) *catena*-tetra-μ-cyanonickelate(II) clathrates and their degradation intermediates 57

*Dis*persive *qua*si-*c*hemical model
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189

Dithiooxamide
The thermal behavior of dithiooxamide ligands and their nickel complexes 111

Dysprosium
NMR study of the structure of the L-valine-Dy^{3+} complex using induced chemical shift data 23

Enthalpy of interaction
The enthalpy of interaction of malonaldehyde with amino acids and myosin: effect of pH 235
Entropy
Theoretical thermochemistry: entropies and heat capacities for a series of organosilicon compounds. Part I 37
Environmental standards
Purity and heat of fusion data for environmental standards as determined by differential scanning calorimetry 155
Equation of state
Analysis of vapour pressures of nitrogen-containing compounds using an equation of state 99

Gibbsite
Chlorination reaction of gibbsite and its thermal decomposition products with carbon tetrachloride 79
Glycine Schiff base
Preparation and thermal study of the magnesium, calcium and barium compounds with a glycine Schiff base containing an ester function 219

Heat capacity
Theoretical thermochemistry: entropies and heat capacities for a series of organosilicon compounds. Part I 37
Heat of fusion data
Purity and heat of fusion data for environmental standards as determined by differential scanning calorimetry 155
Hydroxyproline
Enthalpies of interaction of some *N*-acetyl amides of L-serine, L-threonine and L-hydroxyproline dissolved in *N*,*N*-dimethylformamide at 298.15 K 65

Lanthanide
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293

Magnesium compounds
Preparation and thermal study of the magnesium, calcium and barium compounds with a glycine Schiff base containing an ester function 219
Malonaldehyde
The enthalpy of interaction of malonaldehyde with amino acids and myosin: effect of pH 235

Metabolism
Thermochemical studies of cell metabolism. Part 2. Thermal equation of endogenous metabolism 243
Methanol
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189
Monomeric organic compounds
Application of DTA/DSC and TG for studying chemical reactions of monomeric organic compounds 249
Myosin
The enthalpy of interaction of malonaldehyde with amino acids and myosin: effect of pH 235

Nickel
The thermal behavior of dithiooxamide ligands and their nickel complexes 111
Nitrates
Thermochemical investigation of the solutions of several salts in molten urea at 413.15 K 73
Nitrogen
Analysis of vapour pressures of nitrogen-containing compounds using an equation of state 99

Organosilicon compounds
Theoretical thermochemistry: entropies and heat capacities for a series of organosilicon compounds. Part I 37

Phase transition
High-temperature phase transition in potassium dihydrogen phosphate crystal 225
Potassium dihydrogen phosphate
High-temperature phase transition in potassium dihydrogen phosphate crystal 225
Purity data
Purity and heat of fusion data for environmental standards as determined by differential scanning calorimetry 155

Schiff base
Preparation and thermal study of the magnesium, calcium and barium compounds with a glycine Schiff base containing an ester function 219
Selenates
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293

Serine
Enthalpies of interaction of some *N*-acetyl amides of L-serine, L-threonine and L-hydroxyproline dissolved in *N*,*N*-dimethylformamide at 298.15 K 65
Shape-memory alloys
The relationship between chemical composition and transformation temperatures, M_s and A_s, in polycrystals and single crystals of Cu–Zn–Al shape-memory alloys 129
Surface reaction
Mass effects on the surface reaction of chlorine with carbon 91

Tetryl hydrate
The existence of tetryl hydrates 49
Thermal decomposition
Chlorination reaction of gibbsite and its thermal decomposition products with carbon tetrachloride 79
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293
Thermodynamic properties
Prediction of the thermodynamic properties of binary mixtures containing alcohols. I. Application of the DISQUAC (*dis*persive *qua*si-*c*hemical) model to methanol + *n*-alkane systems 189
Thiourea
Thermodynamics of complex formation of Ag^I. VII. Ag^I-thiocarbonyl ligand systems in methanol 1
Threonine
Enthalpies of interaction of some *N*-acetyl amides of L-serine, L-threonine and L-hydroxyproline dissolved in *N*,*N*-dimethylformamide at 298.15 K 65
Transformation temperature
The relationship between chemical composition and transformation temperatures, M_s and A_s, in polycrystals and single crystals of Cu–Zn–Al shape-memory alloys 129

Valine
NMR study of the structure of the L-valine-Dy^{3+} complex using induced chemical shift data 23
Vapour pressures
Analysis of vapour pressures of nitrogen-containing compounds using an equation of state 99

Yttrium
Studies on double selenates. X. Thermal decomposition of lanthanide, yttrium and calcium double selenates 293
